

TrilioVault for Red Hat Virtualization (RHV)

ENTERPRISE-GRADE DATA PROTECTION FOR RHV, RHHI-V & OVIRT

TrilioVault is the RHV-native data backup and recovery solution that gives administrators the ability to **restore entire workloads in one click**.

TrilioVault's agentless, software-only solution provides self-service protection and recovery of entire workloads. Foundationally architected for virtualized infrastructure, TrilioVault is forever scalable with zero performance degradation.

Software like TrilioVault helps RHV users protect their infrastructure and efficiently create, store and manage point-in-time backups while providing fast recovery times when required — a crucial element in the data protection continuum.

Plus, TrilioVault is agentless and non-disruptive by design, both during deployment and operation. With TrilioVault, businesses have complete control, so they can backup their virtualization infrastructure in a way that's easily recoverable, requires little-to-no central IT administration, and reduces total cost of ownership.

TRILIOVAULT FOR RED HAT VIRTUALIZATION

With TrilioVault You Can ...

Agentless

A TrilioVault data mover runs behind the scenes as part of the RHV node

KVM Native

Fully integrates with the Red Hat ecosystem of Red Hat Ceph and Red Hat Cloud Forms

Self-Service Management

Admins can backup and restore their workloads via RHV Manager

Point-in-time Recovery

Restore to a fully functional application environment at a specific point-in-time.

Scalable

Linear scale with zero degradation

Non-Disruptive

Snapshot captures of entire workloads including VMs, applications, data and metadata

THE RHV-NATIVE DATA PROTECTION SOLUTION

Native Integration

Capture your entire workload

- Integrates into RHV GUI
- API-driven
- Non-disruptive deployment & execution using Ansible
- RBAC controlled management of backups

Self-Service

Recover your whole workload or individual VMs to a point-in-time

- Mounts workloads
- One-click workload restore
- Copy or restore to new hypervisor
- File & folder recovery search & recovery
- Migrate to a new infrastructure

Enterprise Features

Restore individual items, VMs, or workloads on-demand

- Backup to NFS and S3
- Reporting, Alerting and Monitoring
- Policy-based global job scheduling
- Linear, infinite scale
- Incremental forever
- Application-aware
- Agentless

TRILIOVAULT FOR RED HAT VIRTUALIZATION

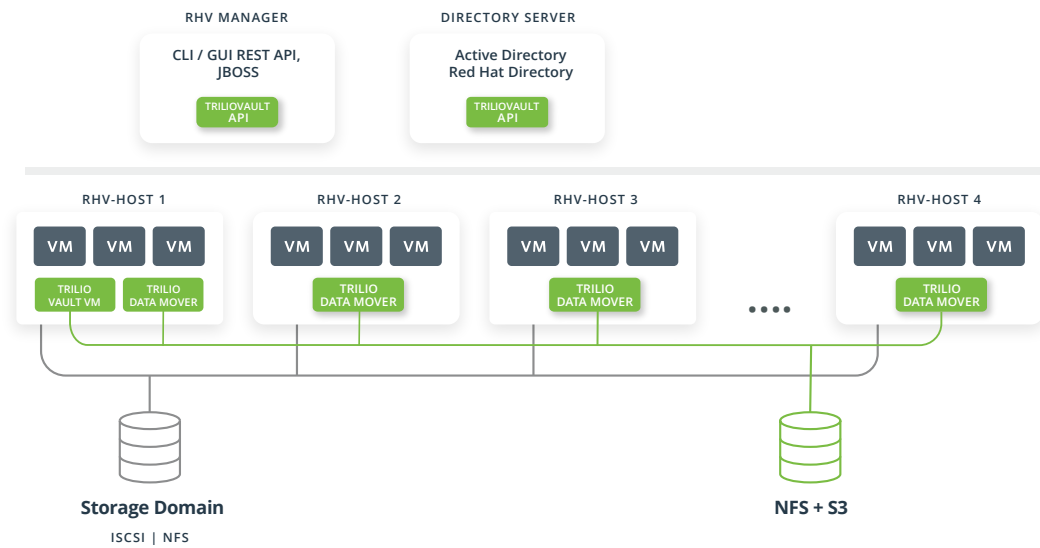

WHAT TRILIOVAULT CAPTURES

- The whole VM Disk on block level
- Network configuration
- VM definition
- VMs (single and multiple)
- VM metadata

HOW YOU CAN RESTORE

- Operational Recovery
- Disaster Recovery
- Test/Dev
- New RHV Hypervisor
- Files/Folder-Level Restore

HOW IT WORKS

USE CASES

BACKUP & RECOVERY

Application-centric backup and recovery of data and meta data with point-in-time capture of incremental change blocks of the workload via a data mover.

DISASTER RECOVERY

TrilioVault for Red Hat Virtualization (TVR) makes it simple to restore workloads that reflect your hypervisor's last-best-known-state. TVR allows admins to manage backup and DR policies including; storing point-in-time copies in NFS repositories, backing up data and metadata into a new host, data center, or hypervisor and migrating applications and VMs from one RHV to another with ease.

MIGRATION

TrilioVault allows administrators to easily upgrade to a newer version of RHV, move to a new RHV host or geolocation and shift backups to another RHV hypervisor.

COMPATIBILITY

DISTRIBUTION

STORAGE

iSCSI

NFS

About Trilio

Trilio is trusted by global cloud operators to deliver data protection, infrastructure migration and version management. Our TrilioVault technology supports Kubernetes containers like OpenShift, OpenStack hybrid clouds and Red Hat Virtualization environments to recover from disasters, migrate workloads, move workloads to new infrastructures and migrate to new software distributions.
